

TITLE 228 - DEPARTMENT OF LABOR

CHAPTER 39 - LEVELING AND ALIGNMENT

001. This chapter is adopted pursuant to Neb. Rev. Stat. §48-1803.

002. Corner posts, central columns, or support structures of a ride designed to operate on a perpendicular axis shall be plumb and secured so that the path of the sweeps or platforms shall be level and operate on a true horizontal plane at right angles to the axis of the pivot. A ride whose carriers are designed to operate on a horizontal axis shall be leveled so that the carriers will orbit in a true perpendicular plane.

003. The base of a ride employing a combination of orbiting planes or a ride whose carriers operate normally in a plane other than true horizontal or vertical shall be leveled and plumbed and secured so that they will not tip or shift and will be stable under the most adverse operating conditions except for a ride designed to permit flotation characteristics or flexibility or designed to operate properly whether the base is plumb or level or not.
