Data & Resources

Click on the buttons on the top right to access a range of resources, information, and data.

State Statistics

This section provides information on the average wage, number of job openings, and more. Click on the title to learn and see more data about each topic.

Statistically Speaking

Metropolitan or Micropolitan Statistical Area?
Metropolitan Statistical Areas (MSAs) have at least one urban area of 50,000 or more population within a county, plus adjacent counties with a high degree of social and economic integration as measured by commuting ties.

Micropolitan Statistical Areas (MCs) are also delineated by whole counties and include adjacent areas with socio-economic similarities. Micropolitan status requires at least one urban area population with a minimum of 10,000 and less than 50,000.

Spotlight on Trends: Education Demand and Hiring Difficulty Statewide

"Wages, required education, and required skills all influence each other in local labor markets. Generally, in Nebraska our surveys find higher demand for jobs where employers require less education. Occupational skills deficiencies among applicants is a much more common hiring difficulty for employers rather than formal education."

Through Nebraska's labor availability surveys, employers provide NDOL with job titles that they frequently hire and that are difficult to hire. Various other data such as wages, education, experience, and reasons for difficulty hiring are collected. For the last three years, our surveys have found that, according to employers, a lack of applicants was the largest driver of difficulty hiring."

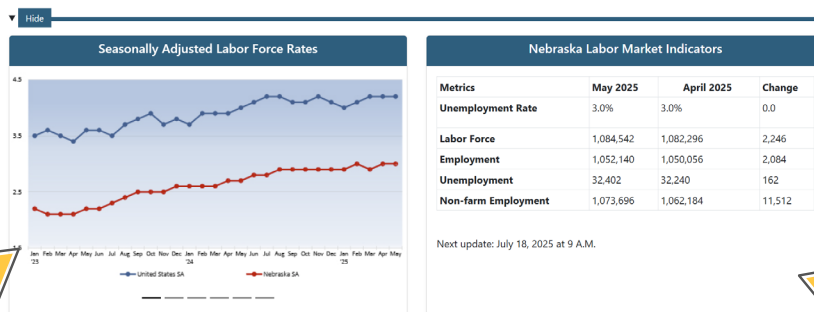

To learn more about businesses' reported hiring difficulty in Nebraska, plus additional economic news and labor market data, check out the May 2025 issue of Nebraska Workforce Trends.
